

SMARTER SECURITY AND COMPLIANCE SOLUTIONS

As a business processing payments, a mandatory part of your data security is that you report your PCI compliance every year. SaferPayments Managed by Worldpay from FIS can help guide you through your reporting with just a phone call, freeing you up to focus on your business.

Simple and
effective solution

Improved data
security

Work with expert
via phone

Smart and hassle
free process

Security and compliance made easy

Our dedicated team will guide you every step of the way to help you maintain your payment compliance and help improve your cybersecurity. Add to that breach assistance tools, and you have a solution set that can provide real peace of mind.

Support when you need it most

- **Guided PCI compliance** that has your back
 - Phone-based, guided compliance reporting with a trained agent
 - We'll conduct any necessary scans on your behalf and then call you to discuss results
 - Proactive support means we will call you anytime tasks or scans are due to maintain your compliance
 - Cybersecurity software with access to a suite of advanced cyber tools to help improve your data security
 - Cybersecurity support gives you access to a team year-round who can assist with any data security issues
 - We'll run scans on your website to help maintain web security
- **Breach assistance** provides peace of mind with financial support in the event of a data breach
- Merchants that are using Worldpay's **point-to-point encryption** will benefit from PCI scope reduction and get a simpler SAQ within SaferPayments*

Keep your system secure

When you stay compliant, you are part of the solution: a united, global response to fighting payment card data compromise. Together, we can make a difference.

Powerful security tools

Delivered as part of the managed service, our security tools will assist you in protecting your business against cyber threats. They can help identify areas in your system that are vulnerable to being exploited by hackers or malware. Once identified, we can then work with you to fix any issues and help to prevent future problems from occurring.

Endpoint Protect

Features	Technical Benefits	Business Benefits
ANTIVIRUS	Automatically detect and eliminate known viruses, worms and other malicious software.	Mitigates the risk of your business being commercially impacted by malicious activities.
SYSTEM CONFIGURATION	Analyses password policies, checks for available OS and application updates.	Confidence that systems are up-to-date, and risk of a security incident is reduced.
CONTAINERISATION	Automatically isolates and analyses unknown and potentially malicious files to prevent infection.	Mitigates the risk of commercial impact of zero-day threats (such as Ransomware).
BEHAVIOURAL ANALYSIS	Locally analyses application behaviour and actions running inside or outside of containment.	Helps protect users against unwarranted changes to applications by unauthorised sources.
HOST INTRUSION PREVENTION	Actively monitors for evidence of a breach of security or potential data compromise.	Shortens incident response time allowing you to respond quicker to a security incident.
ENDPOINT FIREWALL	Filters traffic to/from Windows workstations and servers. Allows known safe, blocks known bad.	Mitigates the risk of your business being commercially impacted by malicious activities.
NETWORK PERIMETER SCAN	Scans the external facing IP addresses of your business to ensure no vulnerabilities exist.	Resulting report helps you to pinpoint security flaws that may exist in your externally facing network.
CARDHOLDER DATA SCAN	Displays files and folders containing suspected unencrypted payment card data.	Gain peace of mind that you aren't storing any unencrypted payment card data on your devices.

Web Application Firewall (WAF)

Features	Technical Benefits	Business Benefits
WAF	Blocks attacks on web server vulnerabilities and controls where/when applications are accessed.	Helps your business to defend its web presence from an online attack to ensure continuity of website(s).
ALERT MECHANISM	Scheduled reporting and real time alerts.	You will receive exactly the intelligence and remediation advice you need.
DDOS PROTECTION	The capability to deal with a DDoS attack of up to 10TB.	Reduces web downtime risk by increasing resilience to common forms of attacks.
APP INTELLIGENT NETWORKING	Advanced signature and anomaly-based intrusion detection continuously monitors network activity.	You will benefit from threat analysis and intelligence to assist in informing your defences.

Mobile Device Security Scan

Features	Technical Benefits	Business Benefits
OS VULNERABILITY SCAN	Quickly assess vulnerabilities that exist on a mobile's operating system.	Ensure mobile devices are vulnerability free.
THREAT RATING	Assess threats from apps and operating systems in use.	Ensure only safe and reputable applications are being used.
CARDHOLDER DATA SCAN	Displays files and folders containing suspected unencrypted payment card data.	Peace of mind that unencrypted payment card data is not being stored.

Simplify the PCI compliance process by offering SaferPayments Managed.
